STIC-Biotech/ChemLib

From:

Huff, Sheela

Sent:

Tuesday, February 21, 2006 5:32 AM

To: Subject: STIC-Biotech/ChemLib search request for 10723872

Please search and interference search SEQ ID NO. 12, 14, 16,18, 20, 22, 24 and 26. All are polypeptides.

Thanks-

Sheela Huff Art Unit 1643 571-272-0834 Remsen 3A15 mailbox Remsen 3C18 FEB 21 2005

The antibody is a chimeric or humanised interleukin-4
The present sequence represents the heavy chain variable region of a humanised murine interleukin-4 (IL-4) antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermacitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, versus-graft disease and renal disease. They are also useful in the production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                              Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                A human/mouse chimeric antibody heavy chain variable region was constructed (given in AAR70191) that contained the mouse anti-human IL-4 MAD 3B9 variable region including 3 CDRs (AAR70199-200) and a human antibody signal peptide (AAR70193). The construct was used for humanized antibody production. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New DNA molecules encoding recombinant antibodies useful for treating IL4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Heavy chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin E-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy.
                    Chimeric and humanised IL-4 monoclonal antibodies (mAbs), derived from high affinity mAbs - useful in treatment of IL-4-mediated and IgE-mediated allergic conditions.
                                                                                                                                                                                                                                                                                                                                                   1 MVLQTQVFISLLLWISGAYGQVTLRESGPALVKPTQTLTLTCTFSGFSLSTSGMGVSWIR

(IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                     QPPGKGLEWLAHIYWDDDKRYNPSLKSRLTISKDTSRNQVVLIMTNMDPVDTATYYCARR 120

This sequence represents the light chain of the chimeric 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic defamatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                     QPPGKGLEWLAHIYWDDDKRYNPSLKSRLTISKDTSRNQVVLTMTNMDPVDTATYYCARR 120

                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                The present sequence represents the heavy chain variable region of murine/human interleukin-4 (IL-4) chimeric antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin B-mediated allergic reactions e.g. allergic rhittis, conjunctivitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also arthritis, host-versus-graft disease and renal disease. They are also useful in the disapnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic falsorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma, anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; gatt versus host disease.
                                                                                      interleukin-4 (IL-4) antibody 389. The sequences are used in the production chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthms, anaphylactic shock, rheumatoid arthritis, hoversus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        67 EWLAHIYWDDDKRYNPSLKSRLTISKDTSSNOVFLKITSVDTADTATYYCARRETVFYWY

                                                                                                                                                                                                                                                                                                                                                                                        ij
                                                                                                                                                                            Spleen cells from mice immunized with human IL-4 were used to prepare hybridomas, which were screened for anti-IL-4 MAb secretion. Only clone 3189 was positive. CDNA clones of the 3189 light and heavy chains were cloned into pGEN7f+ and transformed into E. coli DHS-alpha. The clones were sequenced (AAQB3490-91), and used for antibody engineering. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                  ij
                                       This sequence represents the heavy chain of the murine 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (ILA) monoclonal antibody for the treatment of immunoglobulin B (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 127

The present sequence is the protein sequence of the heavy chain of a humanised antibody of the present invention. In the variable portion, the complementarity determining regions (CDRs) originate from murine monoclonal antibody 10D5 and the framework region originates from human germline VH segment DP-28 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and their framements, as well as nucleotide sequences, vectors, transformed host cells, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Alzheimer's disease or (pre-)clinical amyloid andjopathy, and to inhibit formation or reduce Abeta plaque in the brain.                                                                                                                      The present invention relates to a human-murine chimeric antibody comprising a human antibody containing at least one complementarity determining region (CDR) from each of the variable heavy (WH) and variable light (WH) chains of a non-human, preferably murine, monoclonal antibody (MAD) against respiratory syncytial virus (RSV). The humanised antibody is useful for preventing or treating a respiratory syncytial virus infection. The antibody is also useful for diagnosing RSV infection. The antibody can be injected which is preferable to prior art treatment methods involving intravenous transfusions. The present

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 3G8 antibody light chain or a humanised anti-CD16A derived from the mouse 3G8 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 3G8. Also described is a method (MI) for reducting a deleterious immune response in a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising an Fc region derived from a human IgG heavy chain, where the Fc region lacks effector function or is modified to reduce binding to an Fc effector igand. (I) and (II) have haemostatic, antichneumatic, antiarthritic, dermatological, immunosuppressive, antiinflammatory, curopathic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as claroderma, autoantibody trigged urticaria, pemphigus, vasculitis (RA), systemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), clarome, systemic vasculitis, Goodpasture's syndrome, multiple sclerosis (MS), psoriatic arthritis, ankylosing spondylitis, Sjogren's syndrome, syndrome, systemic arthritis, ankylosing spondylitis, Sjogren's syndromes and also for treating diseases susceptible to treatment with intravenous immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence con immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence con in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           81 YNPSLKSRLTISKDTSRNQVVLTMTNMDPVDTATYYCARRETVFYWYFDVWGRGTPVTVS 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 YNPALKSRLTISKDTSKNQVVLIMTNMDPVDTATYYCARINPAWFAY---WGQGTLVTVS 117
                                                                                                                                                                                                                                                                                                                                                                                                      Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 anti-CD16A antibody; mouse; 3G8 antibody; humanised anti-CD16A antibody;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 QVTLRESGPALVKPTQTLTLTCTFSGFSLSTSGMGVGWIRQPPGKALEWLAHIWWDDDKR

Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.

Disclosure; SEQ ID NO 107; 103pp; English.

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 3G8 antibody light chain or a humanised anti-CD16A derived from the mouse 3G8 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 3G8. Also described is a method (MI) for reducing a deleterious immune response in a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising an Fr region derived from a human IgG heavy chain, where the For region lacks effector function or is modified to reduce binding to an Forest ligand. (I) and (II) have haemostatic, antiheumatic, antianaemic, dermatological, immunosuppressive, antihefammatory, antianaemic, vasotropic, nephrotropic, neuroprotective, antiheoriatic, usofuthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as idiopathic thrombocycopenic purpura (TTP), rheumatoid arthritis (RA), systemic lupus erythematosus (SLB), autoimmune haemolytic anaemia (AHA), scleroderma, autoantibody trigged urticaria, pemphigus, vasculitis syndrome, systemic vasculitis, Goodpasture's syndrome, multiple sclerosis (MS), psoriatic arthritis, anakylosing spondylitis, Sjogren's syndrome, Reiter's syndrome, Kowasaki's disease, polymyositis and dermatomyositis lmmunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention. for treating diseases susceptible to treatment with intravenous and also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 11
S26465
Ig heavy chain V region - mouse
C;Species: Mus musculus (house mouse)
C;Decies: 06-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 23-Jul-1999
C;Accession: S26465
R;Kavaler, J.
submitted to the EMBL Data Library, April 1991
A;Reference number: S2645
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-13 < KNA
A;Cesterences: UNIPARC:UP10000115F69; EMBL:X59115; NID:g51928; PIDN:CAA41841.1; PIC
C;Superfamily: immunoglobulin V region; immunoglobulin homology
C;Keywords: heterotetramer; immunoglobulin
F;6-90/Domain: immunoglobulin homology < IMM>
                               In heavy chain V-II region (He) - human
C;Species: Homo sapiens (man)
C;Species: O7-May-1981 #sequence_revision 07-May-1981 #text_change 09-Jul-2004
C;Accession: A02093

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the light chain of the humanised 389 antibody of
           The present sequence represents the light chain variable region of a humanised murine interleukin-4 (IL-4) antibody 3B9. The specification describes chimeric and humanised IL-4 antibody 3B9. The specification antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhintis, conjunctivitis, atopic acthms, anaphylactic shock, rheumatoid arthritis, versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans

                                                                          A humanized antibody light chain variable region and signal sequence is given in AAR75355. The signal sequence is also provided in AAR70194. The sequences of the first 2 CDRs are identical to mouse anti-human IL-4 MAb 3B9 light chain CDRs (given in AAR70195-96), but the third (AAR70201) differs by a single amino acid from the native mouse CDR (AAR70197). (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                 9

                                                                                                                                                                                                                                                           ö
             (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regularing B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                QKPGQPPKLLIYAASNLESGVPDRFSGSGGTDFTLTISSLQAEDVAVYYCQQSNEDPPR 120
                                                                                                                                                                                                                                                                                                                            A humanized antibody light chain variable region and signal sequence is given in AAR75355. The signal sequence is also provided in AAR70194. The sequences of the 3 CDRs are identical to mouse anti-human IL-4 MAb 3B9 light chain CDRs (given in AAR70195-97). (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                               1 MGWSCIILFLVATATGVHSDIVMTQSPDSLAVSLGERATINCKASQSVDYDGDSYMNWYQ 60

The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic refinitis; conjunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid archritis, host versus-graft disease and renal disease. They are also useful in the production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans

The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin B (IgB) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic achima and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease

The invention relates to a method for treating a primate to induce tolerance to at least one antigen. The method of the invention comprises administering at least one compound which when in a primary mixed lymphocyte reaction in vitro describes the amount of CD4+ CD25+ cells produced. The preferred compound is a humanised antibody or its fragment, that does not bind to the Fc receptor, and includes CDRs that are free of

administering at least one compound which when in a primary mixed lymphocyte reaction in vitro reduces the amount of CD4+ CD2+ cells produced. The preferred compound is a humanised antibody or its fragment, that does not bind to the Fc receptor, and includes CDRs that are free of a glycosylation site. The method of the invention is useful for inducing ameliorating or reducing an immune response to an antigen. The antibody is useful for manufacturing an emedicament for inducing tolerance to an antigen (possibly in the form of a vaccine), for inhibiting an immune response, for inhibiting an immune response, for inhibiting an immune seponse, for inhibiting an autoimman patient, and for treating an autoimmune disease. The current sequence represents the TRX1 light chain.
to at least one antigen. The method of the invention comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                        67 PPKLLIYVASNLESGVPDRFSGSGSGTDFTLTISSLQAEDVAVYYCQOSLQDPPTFGGGT

               tolerance to at least one antigen, specifically for inhibiting, ameliorating or reducing an immune response to an antigen. The antibody is useful for manufacturing a medicament for inducing tolerance to an antigen (possibly in the form of a vaccine), for inhibiting an immune response, for inhibiting the rejection of a graft (such as an organ) in a human patient, and for treating an autoimmune disease. The current sequence represents the TRX1 light chain amino acid sequence.

                                     The invention relates to a method for treating a primate to induce to at least one antigen. The method of the invention comprises administering at least one compound which when in a primary mixed lymphocyte reaction in vitro reduces the amount of CD4+ CD25+ cells produced. The preferred compound is a humanised antibody or its fragment, that does not bind to the Fc receptor, and includes CD8s that are free of a glycosylation site. The method of the invention is useful for inducing ameliorating or reducing an immune response to an antigen. The antibody is useful for manufacturing a medicament for inducing tolerance to an antigen (possibly in the form of a vaccine), for inhibiting an immune response, for inhibiting the rejection of a graft (such as an organ) in a human patient, and for treating an autoimmune disease. The current sequence represents the TRX1 light chain.

The invention relates to a method for treating a primate to induce tolerance to at least one antigen. The method of the invention comprises administering at least one compound which when in a primary mixed lymphocyte reaction in vitro reduces the amount of CD4+ CD2+ cells produced. The preferred compound is a humanised antibody or its fragment, that does not bind to the Fc receptor, and includes CDRs that are free of a glycosylation site. The method of the invention is useful for inducing tolerance to at least one antigen, specifically for inhibiting, amoliorating or reducing an immune response to an antigen. The antibody is useful for manufacturing a medicament for inducing tolerance to an antigen (possibly in the form of a vaccine), for inhibiting an immune craponse, for inhibiting an immune craponse, for inhibiting an immune craponse, for inhibiting an autoimmune disease. The current sequence represents the TRX1 light chain amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              66 PPKLLIYAASNLESGVPDRFSGSGSGTDFTLTISSLQAEDVAVYYCQQSNEDPPRFGGGT 125

The present invention relates to a process of treating a primate to induce tolerance to at least one antigen, which comprises administering to the primate at least one anti-CD4 antibody or lis fragment in an initial dose of at least 40 mg/Kg and at least one compound that inhibits CD8+ T cells, where the anti-CD4 antibody or its fragment is present in the primate when the antigen is present in the primate. The method is useful in treating a primate to induce tolerance to at least one foreign antigon to prevent transplant rejection. The present sequence is an antibody fragment used in the exemplification of the invention.
                                     Treating a primate to induce tolerance to at least one antigen comprises. administering at least one anti-CD4 antibody or its fragment in an initial dose of at least 40 mg/kg and at least one compound that inhibits CD8+ T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating a primate to induce tolerance to at least one antigen comprises administering at least one anti-CD4 antibody or its fragment in an initial dose of at least 40 mg/kg and at least one compound that inhibits CD8+ T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 125

                                                                                                                                                                                                                                                                                                             The present invention relates to a process of treating a primate to induce tolerance to at least one antigen, which comprises administering to the primate at least one anti-CD4 antibody or its fragment in an initial dose of at least 40 mg/Kg and at least one compound that inhibits CD8+ T cells, where the anti-CD4 antibody or its fragment is present in
                                                                                                                                                                         Treating a primate to induce tolerance to at least one antigen comprises administering at least one anti-CD4 antibody or its fragment in an initial dose of at least 40 mg/kg and at least one compound that inhibits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PPKLLIYAASNLESGVPDRFSGSGSGTDFTLTISSLQAEDVAVYYCQQSNEDPPRFGGGT 125
                                                                                                                                                                                                                                                                                                                                                                                                                  the primate when the antigen is present in the primate. The method is useful in treating a primate to induce tolerance to at least one foreign antigen to prevent transplant rejection. The present sequence is an antibody fragment used in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                           ò
                                   The present invention relates to a process of treating a primate to induce tolerance to at least one antigen, which comprises administering to the primate at least one anti-CD4 antibody or its fragment in an initial dose of at least 40 mg/Kg and at least one compound that inhibits CD8+ T cells, where the anti-CD4 antibody or its fragment is present in the primate when the antigen is present in the primate. The method is useful in treating a primate to induce tolerance to at least one foreign antigen to prevent transplant rejection. The present sequence is an antibody fragment used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                              1,

Inducing tolerance to an antigen comprises administering a CD4 antibody alone or in combination with other compounds that induce tolerance against one or more antigens.

Claim 11; Fig 3A; 85pp; English

The invention relates to a novel method for treating a primate to induce tolerance to at least one antigen. The method comprises administering a compound, or a combination of compounds, that induces tolerance against one or more antigens. The compound or the combination being in a primary mixed lymphocyte reaction and that generates in the primary mixed lymphocyte reaction and that generates in the primary mixed lymphocyte reaction and that centuces at least one of the primary and secondary mixed lymphocyte reactions, and the amount of at least one of IL-2, IL-4 and IL-12 in a secondary mixed lymphocyte reactions, and the amount of at least one of IL-2, IL-4 and IL-12 in a secondary mixed lymphocyte reaction. The compound or the combination being cadministered in an amount and for a time so as to induce tolerance against the antigen, the compound or the primate. The invention further comprises: an antibody that binds to the same epitope as the humanised antibody given in the specification; a composition comprising the cantibody and a pharmaceutical carrier; inducing tolerance to an antigen in a patient; inhibiting the rejection of a graff in a human patient; and screening for a composition; or a composition are in a patient or for inhibiting the rejection of a graff in a human patient; and screening continuities: immunosuppressive, antirheumatic, antirhelance. The compositions of the invention have the following activities: immunosuppressive, antirhelanmatic, antirhelance antirhelance antirhelance antirhelance and antipulance antirhelance and antipulance antirhelance and a compositions of the invention have the following antirhelance. The compositions of the invention have the following antirhelance and antipulance antirhelance and antipulance antirhelance and antipulance and antialabetic, neuroprotective, antilinflammatory, antiallergic, antiallergic, antiallergic, antiallergic, and antiacty, antiallergic, and antimicrobial. The composition and methods are useful for inhibiting, preventing or ameliorating an immune response against an antigen, such as in the inhibition or treatment of transplant rejection, graft-versus-host disease, autoimmune diseases (e.g. rheumatoid arthritis, diabetes or multiple sclerosis), inflammation, allergy, asthma, cancer or infections. These may also be used for identifying compounds or agents useful for inducing tolerance against antigens. This sequence represents the protein of a humanised TRX1 antibody region of the invention.

A.Note: the sequence was determined from the differentiated gene
A.Note: the authors translated the codon TGC for residue 76 as Trp
C.Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kan a faulfide bonds. In some cases, such as IgA and IgM, the subunits associate into S.Superfamily: immunoglobulin V region; immunoglobulin homology
C.Keywords: heterotetramer; immunoglobulin homology
C.Keywords: heterotetramer; immunoglobulin price as Fil-20/Domain: signal sequence #status predicted <SIG>
